Sulfur_X

Sulfur_X is an advanced degassing model to track the evolution of S, CO2, H2O, and redox states in melt and co-existing vapor in ascending mafic-intermediate magma.

Reference: Ding, S., Plank, T., Wallace, P. J., & Rasmussen, D. J. (2023). Sulfur_X: A model of sulfur degassing during magma ascent. *Geochemistry, Geophysics, Geosystems*, *24*(4), e2022GC010552.

Activity: Sulfur_X on VICTOR

- Login to VICTOR and select a small server size.
- In The Launcher, open the terminal using the icon:
- Type *victor setup* and press enter.
- Select SULFUR_X from the list that appears by typing its corresponding number (17) and pressing enter.
- In the home directory (on the left of your screen) the  folder will load. Double click on the folder to open it.

- Within the Sulfur_X folder, you will see  , open the Notebook by double clicking on it.

- Run the model: 
- Save your visual outputs by holding shift and right clicking on the graph, then selecting “Save Image As…”

Example Outputs:
